

ARTIFICIAL INTELLIGENCE SERVICE

Service directed at incorporating AI techniques into the processes of any company. We have experience in highly diverse AI techniques for classification, prediction, grouping, natural language processing, deep learning, process optimisation, etc.

Main feature / technology

We have been working with different artificial intelligence technologies since 1998. Over the years, we have been expanding our knowledge as newer and more advanced AI technologies have emerged. We now have extensive experience in very many AI techniques.

Main applications and advantages :

AI is applicable to virtually any process of a company, meaning that its spectrum of application is very broad. It is sometimes applied to automate processes which it had seemed only a human could perform. On other occasions, the process is already automated but the idea is to optimise it to yield better quality results.

Status of the technology:

Available on the market

Area:

Digital transformation

Information:
